CSC 4350 - Test Scenarios
Macrosoft Team Members: Ethan Bang, Stephanie Hayden, Andre Nienaber, Brenda Samano, Ashley Yu

Create Event

- User navigates to the website and logs (assuming the account has already been created) into their account. User clicks on the 'Create Event' button on the homepage. User fills in event details: title, description, date, visual, and categories, and posts the event. User quits.

RSVP for Event

- User navigates to the website and logs (assuming the account has already been created) into their account. User searches for the desired event on the homepage. User clicks on the event tab, and is taken to the event details page. User then fills in the 'RSVP' box by selecting 'attending' or 'not attending,' as well as the 'Pay for Ticket' information, if requested. User quits.

Receive Notifications

- Users will log into their account, (assuming their account has already been created). User clicks on desired event to view event details. User clicks on the notification button and verify to receive notifications, user clicks yes, enabling the notification option for the event.

View event

- User log into their account (assuming they've previously created an account). The user will then browse upcoming events. User quits.
- User will click on search bar to search desired events. User quits.
- User clicks on filtering option and click on desired features to narrow down their search, user quits.
- User clicks on event from list of events to view details, user quits.
